#### 刨刀 介绍 Shaver Blade Introduction

2.0MM-5.3MM.

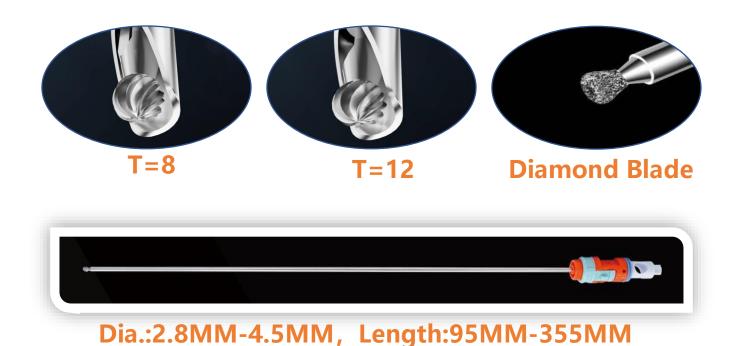

刨刀通常用于软组织切割。在动力系统低速情况下,能产生适宜的负压将组织引入外管窗口中。 天鹰目前刨刀可以适配多种接头,提供长度80MM-300MM,直径2.0MM-5.3MM选择。

Shaver blades are used for soft tissue cutting. At the low speed of the shaver system, the pressure can be generated to introduce the tissue into the outer tube window.

Aquila shaver blades can be adapted to a variety of joints, providing length 80MM-300MM, diameter

#### 磨头 介绍 Shaver Burr Introduction

磨头通常用于骨质的去除。不同类型的磨头可同时迅速切割软组织和骨组织,提高手术效率;常见的刨削磨头刀刃通常分为6刃、8刃和12刃,刀刃的数量越少,切割性能就越强。

天鹰目前的磨头有8刃、12刃、金刚砂磨头可以选,直径可为2.9MM-5.5MM,长度85.6MM-340MM。 Shaver burr is usually used for bone removal. Different types can quickly cut soft tiss ue and bone tissue at the same time; Shaver burrs are usually divided into 6, 8,12 blades, and the fewer the number of blades, the stronger the cutting performance.
